Save Water, Save Money

Save 25 gallons* with the Eco Water Saver...

*Typical 10 minute shower uses 50 gallons.

Eco Water Saver™ 5-Minute Shower Timer

Encourage people to take shorter showers and thus save water, save the energy it takes to heat the water, and save money!

How it works: Each water-proof shower timer has a 5-Minute sand timer imbedded at its center and a suction cup at the back.

The suction cup attaches to most any shower wall or glass enclosure.

With a 180 degree turn, the full end of the sand timer is moved to the top and the sand starts moving. It may be low tech, but it definitely works to help people to become aware of exactly how long they stay in the shower with the water running! Its casing is made with 70% recycled plastic.

AIO-ECOSV as low as \$3.29^(R)

More ideas for this versatile timer:

- 💧 As a sales appointment getter: "give me 5 minute of your time and I'll show you how...."
- 💧 5 minute time out for kids
- 💧 5 minute timer for meetings, limit each speaker to 5 minutes
- 💧 Get out of the shower and watch (name of morning TV program)
